## About the Grant

### Program Details

The NSW Government is committed to achieving net zero emissions by 2050 and this will require industry to decarbonise. The [Net Zero Plan Stage 1: 2020-2030](#) (the Net Zero Plan) will fast-track emissions reductions over the next decade to combat climate change, grow the economy, create jobs and attract investment. The [Net Zero Industry and Innovation Program](#) (NZIIP) is a key component of this plan. Through the NZIIP, the NSW Government will support and partner with industry to reduce emissions and develop clean technology.

The Clean Technology Innovation (CTI) program is a key NZIIP initiative which will unlock the next wave of low emission technologies needed for NSW to reach net zero emissions by 2050. CTI is designed to foster innovation throughout the entire journey of product development. This spans from research and piloting to infrastructure development, commercialisation and deployment.

The project development stream has allocated \$2.5 million to expedite funding for the technical and commercial viability studies of a project or product to make informed decisions before progressing with technology trials. This stream applies a stage-gate mechanism to help risk manage projects that first require feasibility, compliance and/or further engineering design works. This stream utilises a simpler mechanism for awarding grants sooner than the commercial readiness stream through a single stage assessment process.

Please note we have used the words study and project interchangeably in this application form. This grant funding relates to project development stream and your project can be a study/business case/commercial feasibility/approvals or certifications or the like as specified in the [funding guidelines](#) and [supplementary guidance](#).

If you are still unsure if this is the right stream for your project, please refer to the [eligibility checker](#).
